

PHONENUMBER ANALYZER

PHONE NUMBER: 234 - 5678

HOW TO USE THE PHONE NUMBER ANALYZER

The Phone Number Analyzer uses only your prefix and line numbers. You should not enter area codes or country codes. The line number is the portion of your telephone number that is exclusively yours - the last few digits of your phone number. The prefix contains the numbers that come just before your line number but are NOT part of your area code or country code.

If you live in one of the twenty-five countries or territories that use the NANP (the North American Numbering Plan), your line number is the last four digits of your phone number. These countries include the USA, Canada, most of the Caribbean, and several other countries.

If you live in a country using a different numbering plan, enter the digits that are uniquely yours into the line number box. This could be anywhere from 3 to 6 digits.

THE RESULT OF YOUR QUERRY

The prefix of this number adds to 9. This number inspires idealism and compassion. The 9 is favorable for service and health-oriented businesses and works especially well for non-profit groups. The "luckiest" of all numbers, the 9 sometimes brings a financial windfall when you least expect it (although it does

not seek reward). It is not desirable for those seeking material wealth above all else.

The line number has a more powerful influence than the prefix. Your line number adds to 8.

This is the best possible number for business. It is favorable for ambitious, motivated individuals, and tends to improve career and finances. The 8 is practical and materialistic, making it less desirable for individuals seeking spiritual growth.
